

Quarantining is one of the most important aspects of Koi keeping. Whenever we purchase new fish we run a significant risk of introducing a damaging infection into our ponds - the consequences of this could be devastating. It is vitally important that all new fish are quarantined in a suitable facility such as one of these superb systems.

Hose and clips
Net cover

TOP TIPS.

Heating a system has never been easier. Modern purpose made appliances are cheap to buy and simple to install. JWG stock a range of suitable heaters please ask for more details.

There are several benefits:

By increasing the temperature bacterial/viral problems will be induced, which could otherwise lay dormant in cooler water. Healing potential is greatly increased at higher temperatures. Avoids fluctuations in temperature.

Special Purchase

When buying any quarantine system

You can purchase a Aquarline Titanium Heater for only **£49.99**

Insulation.

It is a good idea to add extra insulation to help heat retention. This can easily be achieved with a bubble wrap jacket.
